Flood Protection:
Accoya Timber Flood Door

29

Matching heritage building appearance when installing modern flood protection products has often been a challenging task for manufacturers, so here at M3 Floodtec we have designed and engineered a full range of durable Timber Flood Doors, Kitemark™ Certified to BS 851188.

Manufactured from sustainable accoya engineered wood the Defender Timber Flood Door can be manufactured in a range of styles colours and glazing options to best match the appearance of existing doors.

Our Accoya Timber bespoke flood door, shown here, was expertly installed by Watertight International at a riverside property in Bewdley.
